"Beautifully done! A great job of subtly showcasing design while allowing the exhibits to stand out."

Collaboration between the design team and museum scientists developed the concepts for the gallery that encompass scientific ideas and opportunities for educational programming. The result is a richly layered presentation that immerses visitors into the vast and complex collections. Suspended models, animal displays and interactive media engage the visitors in active learning. Specimens, collaged with graphics and stylized forms, emphasize messages, connections and aesthetics. The result is a successful balance of message delivery and artful presentation.

Over 25 years, we have evolved our viewpoint about design to create extraordinary moments and opportunities for people to have experiences that change their understanding and perspective of the world they live in.
